PROFESSIONAL SUMMARY

I'm a driven Software Engineering student and full-stack developer with hands-on industry experience architecting and shipping production-ready web applications. I specialise in Angular, Next.js, and TypeScript on the frontend, with solid backend exposure through FastAPI, Node.js, and RESTful API integration. I've built and deployed real-world systems — from a university lost-and-found platform backed by MySQL and FastAPI, to a PWA expense tracker powered by Firebase — demonstrating my ability to own features end-to-end. I thrive in collaborative, agile engineering teams, take code quality seriously through reviews and testing, and I'm constantly levelling up to stay current with modern development practices and tooling.

EXPERIENCE

Frontend Developer

April 2025 – Present

SIDID (Solutions for Inclusive Development and Innovative Design) — Remote

- Architected and delivered full-stack web features, contributing across the entire stack — from React/Next.js UI components to Firebase backend services and database design.
- Integrated Firebase Authentication and Firestore to implement secure, real-time data management and user session handling across multiple production projects.
- Identified and resolved critical performance bottlenecks, optimising load times and improving overall application responsiveness.
- Collaborated with cross-functional teams using agile workflows, consistently meeting sprint milestones and delivery deadlines.
- Maintained clean, scalable codebases via GitHub — managing branching strategies, resolving merge conflicts, and upholding code integrity.
- Represented the organisation at multiple hackathons, rapidly prototyping and shipping functional solutions under tight time constraints.

Software Developer Intern

Jan 2025 – June 2025

HiiT Plc — Hybrid

- Engineered responsive, component-based web applications using Angular, TypeScript, Tailwind CSS, and Bootstrap, following Angular best practices and SOLID principles.
- Designed and integrated RESTful APIs to enable seamless data exchange between frontend interfaces and backend services, improving data flow and UX consistency.
- Authored and executed comprehensive test plans — including functional, regression, and edge-case testing — to ensure bug-free releases before user deployment.
- Managed the full GitLab workflow: branching, merge requests, conflict resolution, and active participation in peer code reviews.
- Mentored incoming interns on web development fundamentals, component architecture, and industry coding standards.

PROJECTS

Findit — Lost and Found Management System

[GitHub](#) | [Live Demo](#)

- Architected a full-stack lost and found platform for Babcock University, enabling students to report and recover items through a structured, database-driven workflow.
- Built a performant, server-rendered frontend with Next.js, TypeScript, and Tailwind CSS; designed RESTful endpoints with FastAPI (Python) and persisted data using a normalised MySQL schema.
- Implemented role-based item management, search/filter functionality, and responsive design optimised for mobile and desktop.

Trackr — Expense Tracking PWA

[GitHub](#) | [Live Demo](#)

- Developed a Progressive Web App (PWA) with offline support, enabling users to log and monitor daily expenditures without requiring a native app install.

- Leveraged Firebase Firestore for real-time data sync and Firebase Auth for secure user sessions; built interactive spending charts for pattern analysis.
- Delivered a fully responsive, installable PWA using Next.js, TypeScript, and Tailwind CSS with optimised performance scores.

ALBU E-Voting Platform

[GitHub](#) | [Live Demo](#)

- Engineered a secure, transparent e-voting system for Babcock University's Accounting Department, handling candidate registration, ballot casting, and real-time result collation.
- Implemented vote integrity constraints and access control using Supabase (PostgreSQL), preventing duplicate submissions and unauthorised access.
- Delivered the full-stack solution with Next.js, TypeScript, and Tailwind CSS, deployed to Vercel with zero-downtime.

Personal Portfolio Website

[GitHub](#) | [Live Demo](#)

- Designed and built a performant portfolio site featuring a glassmorphism UI, smooth CSS animations, and fully responsive layouts across all screen sizes.
- Implemented client-side routing with Next.js, achieving fast page transitions and strong Core Web Vitals scores.

EDUCATION

Babcock University — Ilishan-Remo, Ogun State, Nigeria

2022 – 2026

B.Sc. Software Engineering | GPA: 4.10 / 5.00 | Expected Graduation: July 2026

- Relevant Coursework: Data Structures & Algorithms, Internet Technologies (SENG 412), Software Quality Management (SENG 402), Object-Oriented Software Development, Software Security Engineering, Artificial Intelligence & Applications

LEADERSHIP & VOLUNTEERING

Full Stack Developer

Sep 2025 – May 2026

Canaan Land Chapel Graduating Class Web Dev Team

- Built and maintained the graduating class e-voting web platform using modern frontend frameworks, ensuring reliability during live election events.
- Conducted peer code reviews and enforced coding standards across all team contributions to maintain a high-quality codebase.

Full Stack Developer

Sep 2025 – May 2026

Software Development Unit — Babcock University

- Co-developed Findit, a university-wide lost and found system, collaborating with a team of developers to design, build, and ship the full-stack solution.
- Championed code review culture and engineering best practices, ensuring consistent quality and alignment across all team contributions.

SKILLS

Frontend:	JavaScript (ES6+), TypeScript, HTML5, CSS3, Angular, React, Next.js, Tailwind CSS, Bootstrap
Backend:	Node.js, FastAPI (Python), PHP, RESTful API Design & Integration
Databases:	MySQL, Firebase (Firestore & Auth), Supabase (PostgreSQL)
Cloud & DevOps:	Git, GitHub, GitLab, AWS, Azure, Vercel, CI/CD Pipelines, Merge Requests & Code Reviews
Testing:	Manual QA, Bug Tracking, Application Testing & Debugging
Practices:	Agile & Scrum, Component-Based Architecture, Responsive Design, Version Control, PWA Development
Tools:	VS Code, Trello, Notion
Soft Skills:	Effective Communication, Problem-Solving, Team Collaboration, Project Management, Adaptability, Time Management
